

C++ <mutex> Header - Components Overview

Key Components in <thread>

Component	Description
std::thread	Represents a thread of execution. Can be joined or detached.
std::this_thread	Namespace with utilities for current thread (e.g., sleep, get_id).
std::thread::id	Represents a unique identifier for a thread.
std::thread::hardware_concurrency	Returns the number of concurrent threads supported.
std::this_thread::get_id	Gets the ID of the current thread.
std::this_thread::yield	Suggests to reschedule execution of threads.
std::this_thread::sleep_for	Blocks the current thread for a relative time duration.
std::this_thread::sleep_until	Blocks until a specific time point.
